.... 3

**No Glue**

**No Tools**

**No Skill**

**No Kidding**

The ID Technology MediBand™ is an innovative, alternative emergency medical identification system that is worn and displayed on your watch - something you already wear. These durable, low profile, proprietary metal alloy accessories are extremely lightweight and easily attach and mold themselves around most types of watchbands. Each MediBand™ tastefully displays, in high resolution, the red universal medical alert symbol with contrasting black text describing your affliction, and lastly the words "Wallet Card", indicating that a complete personal medical profile is also being carried. This high-tech product is not silk-screened, printed or engraved. All graphics and text are contained within the clear hardened surface of the MediBand™ to provide maximum protection against chipping and other outside influences including body fluids, salt water, solvents, gasoline and most industrial chemicals.

The MediBand™ Emergency Medical ID System includes a matched pair of watchband attachments, one in silvertone and one in goldtone, displaying your choice of a pre-inscribed medical condition from our available library. A comprehensive, multi-category, emergency wallet card containing seventeen lines of available space for medical and emergency contact information is also provided.
